

Deliverable 1: Versioned Prompts, Config and MCP (20 marks)

- prompts/, config/, and the MCP server, or your equivalents, with semver or explicit version files
- A release tag that aligns the image tag, the prompt bundle, and the MCP server version
- /health, or README evidence, exposing the prompt SHA and versions used at runtime

```

Deliverable 2: GitHub Actions or Azure DevOps Pipeline YAML (25 marks)

- A YAML workflow covering lint and tests, then eval, then MCP health, then build and deploy or a deploy stub
- Triggers on pull request and main, or a documented workflow_dispatch for minute-limited accounts
- If using act or a dry run: submit the same YAML plus the local job logs

Deliverable 3: Automated Eval and Regression Gate (20 marks)

- A golden set, or labelled fixtures, evaluated in CI, where a failing score fails the pipeline
- The metric and threshold documented, for example urgency agreement at 0.85
- A deliberate failing run, or a logged dry run, that blocks the merge or the deploy

Deliverable 4: MCP Health Check in the Pipeline (15 marks)

- A pipeline step that probes the required MCP servers and tools
- A failing probe fails the job, and the deploy does not proceed
- A fallback stub is allowed if a live MCP is unavailable, with the same exit-code contract
